

Specialists in water treatment

Solutions for closed circuits

Water Team designs, produces and markets its chemical formulates to treat water circulating inside closed circuits, such as heating and/or cooling plants for civil and industrial buildings, co-generation plants. We can provide the following chemical products:

- Corrosion inhibitors;
 - Filming agents;
 - Scale inhibitors;
 - De-greasing agents;
 - Biocides;
 - Anti-freeze chemical products.
- Furthermore, in situations in which corrosion or the deposits of lime/iron or of other nature, have compromised the circulation of water, **Water Team**, is able to **provide a chemical cleaning service** which uses passivated acids to remove the deposits **without damaging the plant**.
