Curbing contamination from Legionella

Water Team on the basis of the guidelines approved by the state-regions conference, has developed its method to curb contamination by the pathogen **Legionella Pneumophila**. The company has produced a **range of targeted chemical products**; in association with important **private hospital groups** and with **the University of Bologna**, it has studied their efficacy, obtaining **significant results** which have contributed to modify the international approach to managing the problem. On the strength of the experience gained **Water Team** is able to:

- Perform an inspection on potentially contaminated circuits or plants;
- Microbiologically determine the presence of Legionella;
- Perform a risk assessment of Legionella (in line with the National guidelines);
- Contribute to sanitizing accumulation tanks or the entire water distribution network;
- Propose chemical products which are effective against Legionella and compatible with the drinking water sanitary circuits.
